

HTML Tags:

- HTML stands for **hypertext markup language**.
- Enclosed in greater than and less than signs.
- Some have an opening tag and a closing tag. Closing tags has a slash. These affect what's inside the tags.

Example (renders the text "Forewords" in *heading level 1 text*):

<h1>Forewords</h1>

- Some are self closing (no closing tags), these specify something

Example (specifies an image *my_photo.jpg* to be rendered):

- Some have attributes. Above, "src" is an attribute of the tag. Attributes live inside the < > signs of the tag (of the opening tag if they come in pairs).
- Can be nested but not cross-boundary:

Example:

CORRECT:

<p><h1>Forewords</h1></p>

INCORRECT:

<p><h1>Forewords</p></h1>
